**cleveland heights university heights library**

> building assessment, longterm maintenance plan + budget  
cleveland hts. ohio

Her experience on projects with diverse backgrounds provides Ms. Stinson, a strong understanding of client need and spatial experience. Her work has evolved to include a variety of project types, with a focus on master planning and design for religious and educational facilities. Kelly's ability to simplify complex ideas and engage large groups in problem solving exercises is invaluable when working with building committees and civic groups. Utilizing drafting and graphic programs, hand sketching and model building, she is able to lead these groups through complex programming issues, gain consensus, implement the design concept and study its real-world constructability. Her approachable manner allows clients to work easily with her both individually and in groups. As the Senior Associate, Kelly manages the vast majority of the projects in the office, is the point contact for clients, coordinates employee workload and manages coordination with consultants.

In addition to her work in the office, Kelly spent seven years at Kent State University working in the College of Architecture and Environmental Design as an adjunct professor. The senior level thesis studios focused on community engagement providing her students with a real-world project while supporting the local community. Each studio was unique in that they never served the same community twice. As part of her time at KSU, Kelly was a key member of the team developing the curriculum for the senior level thesis studio.

Today, when she's not spending day and night in the office, Kelly divides her time between yoga, consulting with her husband on his custom cabinetry/millwork business, renovating their 102-year-old home, and chasing after their pair of basset hounds as they lumber, ears to the wind, after squirrels and other woodland creatures.
